Pipe example

This is my first RMarkdown document.

```
library(tidyverse)
```

```
## -- Attaching packages ------------------------------------------------------------------
```

```
## v ggplot2 3.3.2     v purrr   0.3.4
## v tibble  3.0.3     v dplyr   1.0.2
## v tidyr   1.1.1     v stringr 1.4.0
## v readr   1.3.1     v forcats 0.5.0
```

```
## -- Conflicts ---------------------------------------------------------------------------
## x dplyr::filter() masks stats::filter()
## x dplyr::lag()    masks stats::lag()
```

The code uses the pipe operator:

- takes 2 as input
- calculates the square root
- rounds the value
    - keeping only two digits

```
2 %>%
  sqrt() %>%
  round(digits = 2)
```

```
## [1] 1.41
```
